

Step 1

Can you Build this and How Much Will it Cost?

Affinity Building Systems works with local independent builders who have been approved to build our module homes in a specific region. The Affinity Builder will work through preliminary budgets with you and discuss the process. With Affinity Building Systems, you get the home you want, the way you want it, almost from the ground up!

Step 2

Financing

If Financing is needed, Affinity customers can choose a local financing source, or the Affinity Builder can recommend a bank that is familiar with the Affinity home buying process.

Step 3

Design Development

You can start with a standard Affinity modular home design and modify it to fit your needs, or our builder will work with you on a completely custom design. We have hundreds of other plans that we have pre-designed. If you have a site built plan that you would like us to consider adapting to modular construction, we will evaluate the design to determine if it can be modularized without changing the aesthetics of the plan. Some custom plans can take several hours to design and will require a drawing fee to be submitted to Affinity.

Step 4

Finalizing Your Order

Once you have completed the conceptual design, the builder will order the house from the factory. The Builder will sign a purchase agreement with Affinity and send in your deposit for the home. The Affinity engineering department will complete the plans necessary for the building permits while you are finalizing your color selections. Items such as countertops, kitchen & bathroom fixtures, cabinet colors, flooring and shingle colors (if included) will be selected at this time. The plan approvals (Sealed Prints) process can take from 8-12 weeks to complete, depending on the complexity of your plans and which state your new home is going to.

Step 5

Building Your New Home in the Factory

Once your builder has completed the building permit process, the foundation can be started and your home is put into production. The actual build time for your home is about 4 weeks. The current status of our backlog determines when your home is scheduled for production.

Step 6

The House Delivery and Set

The Modules that make up your new home are carefully delivered to your site in preparation for the actual setting of the home on the foundation. If your builder does not have a set crew, Affinity will be happy to recommend crews that are experienced and licensed in your area to your builder. The set crew carefully lifts each module into place with a crane and secures it to the foundation. Most sets are completed in one day, so you can expect that at the end of the day your home is set, secured, and weather tight on the foundation ready for completion by the builder.

Step 7

On Site Finishes

Now that your home is set, the builder can get started on the completion process. Electrical, plumbing, and heating connections are completed. Exterior siding is completed along with porches, decks, patios, walkways, and garages. Some minor interior carpentry and drywall button up is completed prior to the installation of floor coverings. Outside, the builder is completing sewer and water connections along with final grade, lawn, and landscape. Some items purchased with your home are site installed, and your builder along with sub-contractors of their choice, will be including them in the completion of the home at this time.

Step 8

The Final Step

Now that your home is completed, it is ready for a final inspection by the local Building Department. They will ensure that the home was completed to all the State and Local Building Codes and Practices. Once the inspections are completed, a Certificate of Occupancy is issued and you are now able to move into your new Affinity Building Systems home!
